

Planning for Technology Integration

Current Learning activity to reconsider with technology: (include details)	Desired Timeline:
<i>Writing a lesson plan I currently provide students with a template then have them choose a lesson from the state standards and fill out a lesson plan.</i>	<i>Fall 2009</i>

Vision for new learning activity: (include purpose ie: assessment, management, engagement, skill acquisition, etc.)
<i>Engagement & Skill acquisition: I want students to have more ownership in lesson plan creation. Additionally they should be able to compile lesson plans in some way and should be able linking to on-line resources and contact information. Also, they should be able to access current state standards. They should be able to share, copy, and send lessons with other teachers as well as incorporate other lessons into current lessons.</i>

Current Assessment	Possible Assessment
<i>Turn in lesson plan with essay discussing their pedagogical decisions. Presentation of lesson plan to the class.</i>	<i>Submit electronically, present lesson to the class, submit database submissions related to my course. Discuss with other teachers current lesson design issues.</i>

Potential Media/Technology Required (see handout of possibilities)
<i>A lesson planning software program? A database? Learning Management Software program with discussion board capabilities and digital drop box. Access to state educational standards on-line.</i>

Resources:

Next Step: (ie: training, collaborate, software acquisition, installation, etc.)
<ol style="list-style-type: none"> <i>1. Research lesson planning software program.</i> <i>2. Begin training in WebCT</i> <i>3. Identify exact elements I want in a lesson planning</i>

4. *Evaluate Lesson Planning Software programs*
5. *Gather all the state standards websites.*
